Practical - 7

Practical Title: PHP Form Processing with Server-Side Validation and CSV/JSON File Storage Problem Definition: Display event lists, student profiles, notices, or FAQs from external JSON files using Fetch API. Implement dynamic rendering, search, filter, sorting, and pagination.

Theory :

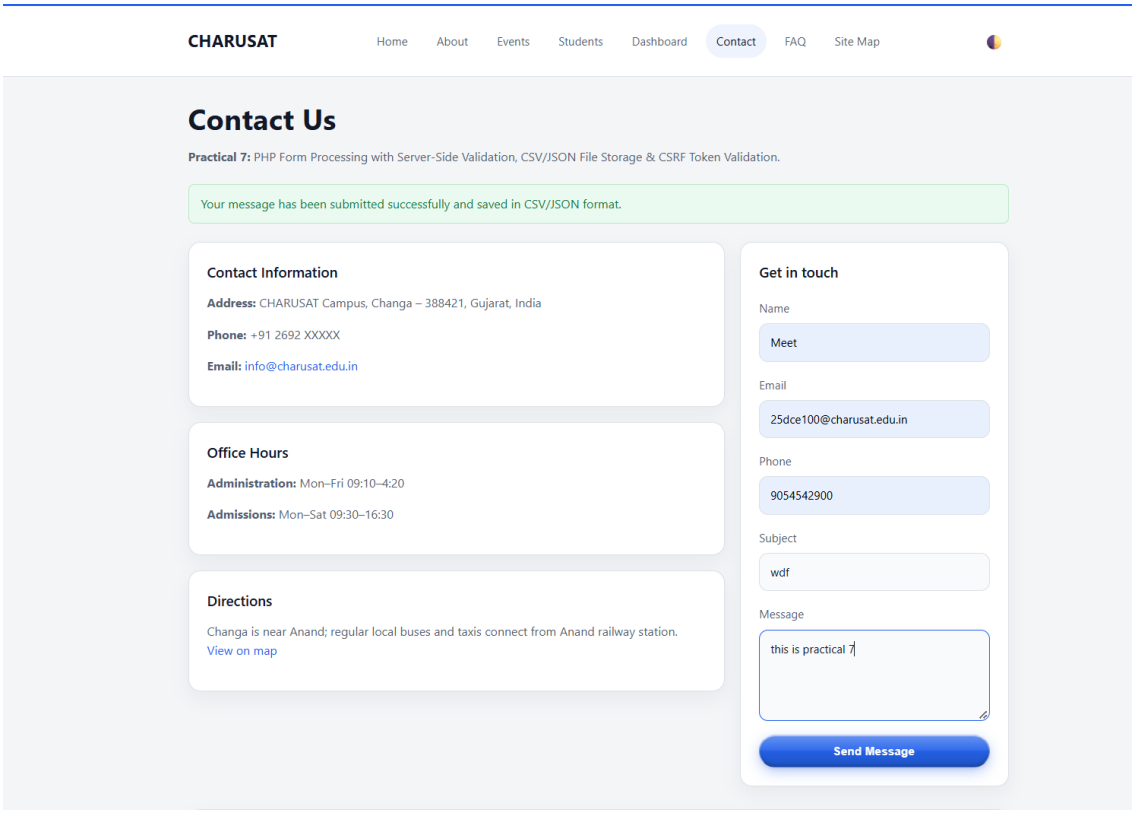

1. Is the form submitted using POST?
Ans:Yes, the form uses the POST method to submit data securely.

2. Are inputs validated and sanitized server side?
Ans: Yes, inputs are validated and sanitized on the server side.

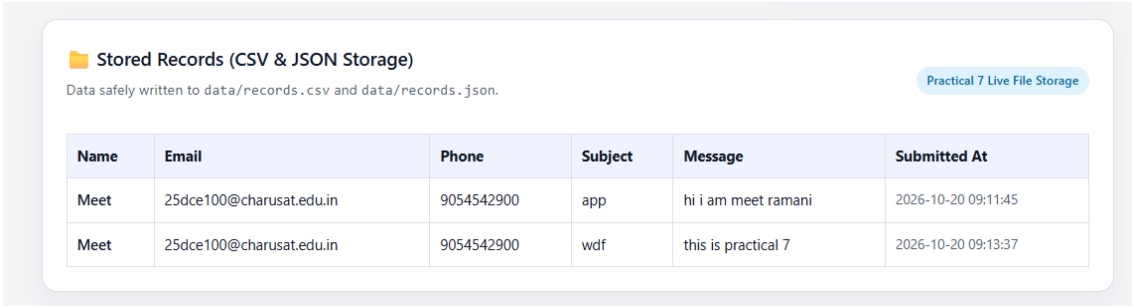

3. Is file writing handled safely
Ans: Yes, file writing is performed safely with proper handling.

4. Are success and error responses displayed clearly?
Ans:Yes, clear success and error messages are displayed to the user.

H. Learning Outcomes:
I am able to implement server-side form processing with safe file-based storage.
